Proiect Baze de date

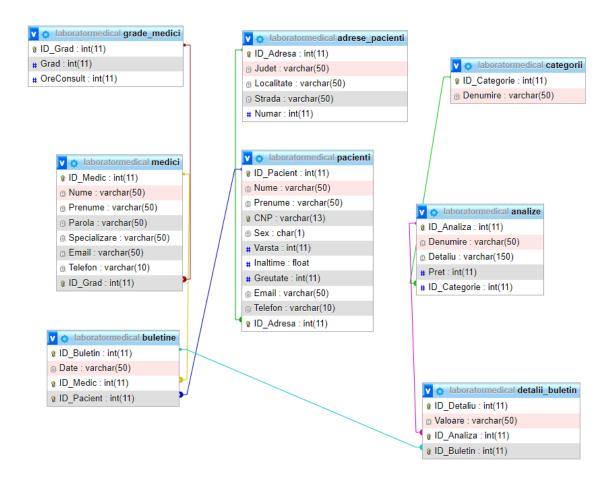

Aplicatie WEB pentru evidentierea analizelor intr-un laborator medical

Pentru a putea tine evidenta analizelor pacientilor intr-un laborator medical, m-am gandit la implementarea unei baze de date. Aceasta baza de date contine urmatoarele tabele:

- adrese_pacienti(ID_Adresa, Judet, Localitate, Strada, Numar);
- ➤ analize(ID_Analiza, Denumire, Detaliu, Pret, ID_Categorie);
- buletine(ID_Buletin, Date, ID_Medic, ID_Pacient);
- categorii(ID_Categorie, Denumire);
- detalii_buletin(ID_Detaliu, Valoare, ID_Analiza, ID_Buletin);
- grade_medici(ID_Grad, Grad, OreConsult);
- > medici(ID_Medic, Nume, Prenume, Parola, Specializare, Email, Telefon, ID_Grad);
- ➤ pacienti(ID_Pacient, Nume, Prenume, CNP, Sex, Varsta, Inaltime, Greutate, Email, Telefon, ID_Adresa);

Stoean Andrei Cosmin 332AB

Legaturile intre tabele, sunt illustrate in imaginea de mai jos. Implementarea bazei de date a fost facuta in *Apache phpMyAdmin*.

Interogari simple

```
SELECT A.Denumire, A.Detaliu, A.Pret, C.Denumire
FROM analize AS A
JOIN categorii AS C
ON A.ID_Categorie = C.ID_Categorie
```

```
SELECT M.Nume, M.Prenume, M.Email, M.Telefon, GM.OreConsult
FROM medici AS M
JOIN grade_medici AS GM
ON M.ID_Grad = GM.ID_Grad
```

```
SELECT P.Nume, P.Prenume, P.Email, A.Judet, A.Localitate, A.Strada
FROM pacienti AS P
JOIN adrese_pacienti AS A
ON P.ID_Adresa = A.ID_Adresa
```

```
SELECT M.Nume, M.Prenume, M.Specializare, GM.OreConsult
    FROM medici AS M
        JOIN grade_medici AS GM
        ON M.ID_Grad = GM.ID_Grad
        WHERE M.Nume = '$nume' AND M.Prenume = '$prenume' AND M.Parola =
'$parola'
```

```
SELECT Specializare, COUNT(*) as Numar_Pacienti
FROM medici
JOIN pacienti ON medici.ID_Medic = pacienti.ID_Pacient
GROUP BY Specializare
HAVING AVG(Varsta) > 21
```

Interogari complexe

```
SELECT Nume, Prenume,
      (SELECT COUNT(*) FROM buletine
      WHERE buletine.ID_Medic = medici.ID_Medic) as Numar_Buletine
      FROM medici
```

```
SELECT Nume, Prenume,
    (SELECT SUM(analize.Pret) FROM detalii_buletin
    JOIN analize on analize.ID_Analiza = detalii_buletin.ID_Analiza
    WHERE detalii_buletin.ID_Buletin = buletine.ID_Buletin) as TotalValoare
    FROM pacienti
    JOIN buletine ON pacienti.ID_Pacient = buletine.ID_Pacient
    ORDER BY TotalValoare DESC
```

```
SELECT Nume, Prenume,
    (SELECT SUM(analize.Pret) FROM detalii_buletin
    JOIN analize on analize.ID_Analiza = detalii_buletin.ID_Analiza
    WHERE detalii_buletin.ID_Buletin = buletine.ID_Buletin) as TotalValoare
    FROM pacienti
    JOIN buletine ON pacienti.ID_Pacient = buletine.ID_Pacient

GROUP BY pacienti.ID_Pacient
    HAVING TotalValoare = '$valuare'
```

```
SELECT Nume, Prenume,
      (SELECT SUM(analize.Pret) FROM detalii_buletin
      JOIN analize on analize.ID_Analiza = detalii_buletin.ID_Analiza
      WHERE detalii_buletin.ID_Buletin = buletine.ID_Buletin) as TotalValoare
      FROM pacienti
      JOIN buletine ON pacienti.ID_Pacient = buletine.ID_Pacient

GROUP BY pacienti.ID_Pacient
      HAVING TotalValoare > 300
```
